

Enigma offers new encryption services

Beaucom Deutschland GmbH is specialized in secure communication for GSM networks.

The new T301E will be introduced at the security in Essen with additional add on functions:

- Tri band capability
- RSA keys also with 2048 bit key length
- Secure encrypted SMS communication
- Key management carried out by customers

The absolute separation of the Security area from the communication level has been realized via a separate Cryptoboard as before. It uses the successfully proved Security card of Deutsche Telekom/TeleSec with keys confirmed by certificate for the use of authentication and encryption for speech or data which improves drastically the communication security.

The devices offer safety from interception in all standard GSM networks on military level combined with easiest operation.
