

## **Marking Division of Rofin-Sinar Laser GmbH Moves to New Premises**

**January 2008 - after 17 years in existing facilities, Rofin-Sinar Laser GmbH, Bergkirchen/Günding, Germany, moves to a new company building in Dieselstr. 15, just 150 m away from the old home.**

Rofin-Sinar develops, produces and distributes solid state and CO<sub>2</sub> laser sources and laser marking systems on this basis. Besides a wide range of standard solutions Rofin-Sinar offers customer-specific systems as well. The company sets a high value on additional services like training programs on operation, maintenance and application technology.

As Rofin-Sinar has been steadily growing during the last years, a relocation became inevitable. Therefore, in 2007 spacious new facilities were built just half a block away. With 7000 square meters the three-story red building offers enough room for all departments – and for future growth, as well.

Visitors will immediately notice a warm and friendly atmosphere in the new premises. Sales, service and training center are just a few steps away. The new application lab with a space of 250 square metres provides the opportunity to run application trials on virtually all of ROFIN's marking systems. Customer applications and lab studies can be carried out with the assistance of experienced engineers.

The new address, which is immediately effective, is:

Rofin-Sinar Laser GmbH

Dieselstr. 15

85232 Bergkirchen

Germany

Telephone: +49-(0)-81 31-704-0 (unchanged)

Facsimile: +49-(0)-81 31-704 100 (unchanged)
