

NEW WATERPROOF EDAC CONNECTORS

New Range waterproof connectors

The new 567 series (JISC0920 splashproof) takes the available circuit sizes up to a maximum of nine from the present five circuits. These products will cover virtually all requirements and are of a high quality design and manufactured standard. Latching mechanisms are featured throughout for secure connection and the low-profile insulators of the 566 and 565 series are particularly attractive where space is at a premium.

They are used in multiple applications requiring circuit protection from water and dust including LED external lighting arrays, emergency floor lighting in railway carriages, cabin light pods in passenger aircrafts, automatic toilet flushing systems - to name some of the more unusual uses.

The German distributor for the Edac waterproof connectors and other components is the Engelking Elektronik GmbH
