

nSDK features and benefits

Feature	Benefit
Abstracted API implementations of major online radio services	Enables the developer to quickly and easily add online radio services to their product without having to implement each service's unique API
USB audio support	Offers a robust USB audio solution for streaming music from mass storage devices and MP3 players
Drivers for audio player and screen	Includes clean, tested source code that enables consumers to play streamed and local sources of audio and easily control playback with a user interface and browser
Community Linux® support package	Offers developers the Linux kernel, drivers and associated system and application software in a single package for easy installation
Implementations of network interoperability standards, including Digital Living Network Alliance (DLNA), Universal Plug and Play (UPnP)	Enables seamless connectivity to wireless network to identify, manage and share audio within a home environment
