## + + + + + + + + **New test probe generation Isoprobe IV** + + + + + + + +

With the new Isoprobe IV series, Multi-Contact offers reliable oscilloscope probes in compact design.

New generation of test probes is an addition to the touch protected MC high frequency program. The greatly reduced size of this new product substantially facilitates the conduct of measurements in a restricted space, while maintaining the good electronic characteristics of MC Isoprobe test probes. Thanks to a high frequency range up to 500 MHz with touch protection up to 300V, CAT III, the Isoprobe IV test probes are particularly suited for electronics engineers, while the probes of the Isoprobe II and Isoprobe III series are designed primarily for electricians. The test probes are available separately or in sets with matching accessories.

For all available versions and technical details, please see our new flyer C HFline.
