iSYSTEM brings you first-hand market commentary

Video streams show real-life market perspective

Schwabhausen, 10. March 2009 – On March 5, this year's embedded world 2009 came to an end. Certainly a special show as iSYSTEM, the pioneer for emulation and debug technologies characterized the event.

Initial feedback showed that exhibitors and visitors alike were quite happy with the event. Although less people just visited and walked over show, there were more high-quality leads and visitors with a set agenda. The mood among attendees was optimistic with many predicting a positive market development. And, as the embedded world is still the largest embedded networking event worldwide, this is really where innovation starts.

Interested in learning more? Then visit our video streams on iSYSTEM's interactive platform for the embedded community on http://embedded.typepad.com. Here you will get first hand show feedback from exhibitors such as Göpel Electronic, LDRA and National Instruments, and learn how real people judge the market.

About iSYSTEM
iSYSTEM specializes in embedded development and test tools, supports customers with their embedded projects and provides professional services. Our vision is to easily enable developers and testers to use embedded development and test tools within the complete development process. The development environment is easy to learn and to use, and open interfaces allow for the flexible integration and application of the iSYSTEM solutions in the entire development process.
