Stainless Steel Rotary Switch offers IP65 Protection and LED Illumination

The stainless steel rotary switches from Engelking are made to optically suit the CS003 range of stainless steel switches and are available with both a choice of two or three switching positions and as one or two pole configurations.

A particularly interesting feature of this product range is the optional LED illuminated lit arrow symbol integrated in the knob. This illumination is available in a wide range of colors and voltages.

This product enables designers to make up a complete panel with an aesthetically pleasing style matched appearance, combining with the dot, ring and non-illuminated pushbutton switches with maintained or momentary contacts and a key switch – all available with a protection class of IP65-IP67.
