

Hannover Messe Energy, Hall 27 S-21, joint stand with the state of NRW
**Energiebau showcases international
Photovoltaic Solutions at the Hannover trade fair**

**Cologne/Hannover, 30 March 2010 – The photovoltaic system provider
Energiebau will showcase its international project experience in the planning and
installation of solar power plants at the Hannover Messe (19-23 April 2010).**

As a partner in the campaign "NRW photovoltaic - Solar power for North Rhine-Westphalia", Energiebau is presenting successful project developments at the joint stand of the federal state NRW; it will also be offering its advice as an international service provider in the project planning, development, financing and installation of solar power systems as off-grid or grid-connected solutions.

Energiebau has been offering its customers turnkey photovoltaic (PV) power systems for domestic and commercial roofs and free areas for more than 25 years. The installation of hundreds of PV systems which are hooked up to the grid or autonomous in more than 15 countries has created extensive expertise in the project planning of systems.

The company has special project experience in the regenerative power supply of areas at remote locations from the grid using autonomous solar power systems, experience garnered by its long years of commitment to work on the African continent. The concept for renewable power supply in rural regions of developing countries was developed and successfully implemented in a number of pilot projects together with the development agency InWent and was awarded with the Roy Family Award of Harvard University in 2007.

About Energiebau Solarstromsysteme GmbH:

Founded in 1983, Energiebau Solarstromsysteme is one of the leading providers of solar power systems in Europe.

The focus of the company is based on the three business fields of project planning and financing of photovoltaic systems, the specialised wholesale trade of solar power components and systems as well as the manufacture of the LORENZ® PV Mounting System.

Around 250 employees at the company's headquarters in Cologne, as well as at its representations in Italy, France and the Benelux countries, generated a turnover of over 300 million Euros in 2009.
