

High pressure in innovative processes – Hennecke at UTECH EUROPE in Maastricht

17.-19. April 2012 in Maastricht – Booth 1470

Competence in all PU applications gives Hennecke its decisive edge over the competition. The machinery and plant manufacturer will be occupying about 60 square metres to promote its comprehensive product portfolio at this year's UTECH. The spotlight is on innovations in the production of fibre-reinforced structural elements, as well as on new machine and mixhead technology for making Formed in Place Foam Gaskets using PU high pressure metering.

The specialist for extremely small outputs starting at 1.5 grams/second: the MT 3 high-pressure mixhead

UTECH EUROPE is the right place to find out all about technical novelties in the area of polyurethane processing. Hennecke GmbH will be present with a multitude of innovations. Different fibre-reinforced structural elements for automotive applications made using the high pressure RTM (HP-RTM) process will be on display. The improved version of the classic RTM process gives users unlimited capacities for producing large volumes in view of the degree of automation and cycle time. Hennecke also offers a tailor-made STREAMLINE machine concept to fit. Moreover, Hennecke will be introducing a new kind of metering machine for extremely small outputs. The system can be used in the application of Formed in Place Foam

Gaskets where the high pressure metering of particularly reactive raw materials enables different process steps to be combined effectively based on a synchronized cycle time. The new MT 3 mixhead for very small outputs is ideal for outputs starting at 1.5 grams per second per component.

Further information about Hennecke GmbH

With over 65 years of experience as well as a considerable annual budget for research and development, Hennecke GmbH produces machines, plants and systems for all PU core technologies. The company's product range comprises high pressure metering machines, mixheads, machines and systems for elastomers, moulded parts, refrigeration equipment, sandwich panels, slabstock and recycling plants, as well as mould carriers, tank farms and peripheral units. It is therefore no wonder that the polyurethane technology specialist is one of the suppliers with the widest range of equipment and the most experience on the global market.
