

Seamless connection of unified archiving and company portals

The Intrexx Business Adapter for dg hyparchive allows data from archives to be used in flexible workflows

United Planet and dataglobal have released an adapter which facilitates the integration of dg hyparchive and Intrexx. The archiving of company documents can therefore be carried out conveniently and in accordance with legal provisions. The integration of archived documents into workflows also guarantees increased efficiency in the workplace

Freiburg, 04th August 2015. At the end of March the two software companies, United Planet and dataglobal, entered into a strategic partnership. Now the adapter, which was jointly developed and allows the seamless connection of the portal and integration software Intrexx with the archiving system dg hyparchive, is complete.

dg hyparchive is one of the most widely used solutions for unified archiving. Data from various sources such as mail, file, ERP or CRM systems can be entered into the archive in any form and set in relation to each other. The archive acts, therefore as a central area for storing data, ensures the consistence of data and manages its retention period.

The ‘Intrexx Business Adapter for dg hyparchive’ now allows for this stored data to be used in Intrexx portals. This means that the data can be incorporated into workflows and applications which are adapted to the specific requirements of the company. With the Intrexx’ process engine, companies can have flexible control over documents as well as the ability to present them web-based in an attractive and intuitive manner.

At the same time new data, which is created in the portal application, can automatically be converted into long-term compatible formats PDF/A or TIFF, assigned to the original and stored directly in the archive. This archive controls the deletion and retention periods in a rule-based manner, thus complying with legal standards.

Press Release No. 7-2015

Printout free of charge, image materials available upon request

The comprehensive data integration capabilities of Intrexx should extensively widen the amount of possible ways that dg hyparchive can be used. According to Katrin Beuthner, CEO at United Planet, an example of a possible use case could be an automated auditing system. “The corresponding workflow can be easily created in Intrexx, the invoice itself is stored in dg hyparchive and the final account can run in SAP because Intrexx also provides corresponding interfaces with this solution.” By attaching an OCR software the process can be automated even further. With this faster method of auditing, companies could receive payment discounts and would also not have to worry about fines, thanks to the overall compliance with legal provisions. It is, therefore, clear that the ROI can be quickly and effectively achieved.

About United Planet

United Planet, with over 4,800 installations and more than 1,000,000 users of its portal and integration software Intrexx in the German-speaking market alone, is one of the market leaders in the sectors covering small and medium sized undertakings, public administration, and organizations such as hospitals. The company is led by Manfred Stetz and Katrin Beuthner.

Using the platform-independent standard software Intrexx, web-based applications up to complete intranets/enterprise portals with advanced functionality can be created much faster, and thus more economically, than with similar programs. Intrexx facilitates the creation of productive workflows and the generation of mobile apps for smartphones and tablet PCs from all manufacturers. Existing data from ERP systems, Microsoft Exchange, Lotus Notes, and any JDBC and OData data sources can easily be integrated with Intrexx and set in relationship to each other. The SAP-certified NetWeaver Gateway interface simplifies connection to the SAP system in an unprecedented manner. Even the directly competing Microsoft SharePoint software benefits from business functionality enhancements through the OData interface. The data integration capabilities of Intrexx are increasingly used as middleware to take unwanted complexity out of existing and heterogeneous software environments.

With Intrexx Share United Planet additionally offers a social business platform, which stimulates the exchange of knowledge and team work among employees, and integrates existing enterprise software into the communication process. In the Intrexx Application Store you will find hundreds of ready-made apps and complete industry portals, ready to download now.
