

## **TRITEC: Swiss Photovoltaic Specialist and Partner**

TRITEC represents lasting quality for photovoltaic systems of all sizes. The international head office of the Swiss company is located in Basle.

For over 20 years, TRITEC has been an international photovoltaic system supplier and centre of competence in the area of renewable energies. All components of photovoltaic systems, be they intended for grid connection or as stand-alone systems, must be perfectly coordinated, in order to achieve optimal efficiency. Therefore, TRITEC advises specialists during the planning, design and implementation of photovoltaic systems.

Besides being a wholesaler, TRITEC is also a system integrator and manufacturer of proprietary products. As system integrator located in Aarberg close to Bern in Switzerland, TRITEC implements bigger international photovoltaic projects itself. One of the major projects of last years: the world largest roof-integrated solar power plant on a football stadium: the stade de Suisse in Bern, Switzerland, with an installed power of 1.35 MWp. As manufacturer, TRITEC is active in the area Measuring Technology. TRITEC's own brand products include the characteristic curve measuring instrument TRI-KA and the irradiation sensor Spektron and brand-new for the Intersolar 2009: the PV on the roof mounting system TRI-STAND.

TRITEC pays great attention to the high quality of products and their product portfolio only contains A-brands from established manufacturers guaranteeing the highest quality. On the one hand, for TRITEC clean energy and sustainability belong together, and on the other, systems generating solar energy are exposed to the harshest weather conditions for many years and can only guarantee long-term investment returns by using the highest quality components.

TRITEC's origins can be found in the implementation of the first Megawatt photovoltaic project in Switzerland in 1987. Today, TRITEC is the leading photovoltaics company in Switzerland – with company bases in Switzerland, Germany, France and Spain as well as partner companies across Europe.
