

STEGO Elektrotechnik GmbH, Schwaebisch Hall, October 10<sup>th</sup>, 2017:

Press Release No. 06\_2017

## STEGO Participation at SPS IPC Drives

### STEGO exhibits: Nuremberg 28th to 30th November

**One of the leading European trade fairs for electrical automation is held annually in Nuremberg. SPS IPC Drives continues to develop positively with a growing number of visitors and an extended exhibition area. The right occasion for STEGO Elektrotechnik to commit to exhibiting in Nuremberg for the first time.**

"The setting of the SPS fair in Nuremberg is ideal. This is where the industry involved in manufacturing switch cabinets meets. We can meet with potential new customers and maintain existing contacts." As commented by Martin Sitter, STEGO Marketing and Sales Director, on the attractiveness of the SPS IPC Drives. The venue Nuremberg is now added to the STEGO exhibition calendar as the second leading trade fair for the electrical industry following Hanover fair. This is the industry where STEGO has made a name for themselves with resourceful solutions in the climatisation of enclosures and control cabinets.

Heating, cooling, regulating and lighting in switch cabinets and enclosures are the core competences of the company headquartered in Schwaebisch Hall, Germany. Production sites in Germany, France and the USA underline the international focus. Corporate subsidiaries in seven European countries as well as in Brazil and the US complement the market handling.

With their steadily growing range of products for the protection of electrical and electronic components, STEGO positions themselves as a pacesetter of intelligent solutions for thermal management. Switch cabinet heaters, filter fans, thermostats, hygrometers and control cabinet accessories ensure optimized climatic conditions in a wide range of environments and secure the reliable operation of sensitive components. For this purpose, the STEGO developers choose innovative solutions with the largest customer benefit. High-quality components and careful design result in fail-safe products for often harsh operating conditions.

More information on switch cabinet climatisation can be obtained at STEGO's booth in hall 5-374. Experts from research & development and sales will be looking forward to meeting the questions of SPS visitors in substantiated technical discussions from November 28<sup>th</sup> on.
