

NEW INNOVATIVE LOCKING IEC INLET

Connect Power securely!

Another first from CLICK Scolmore is the IEC-Lock BTSC13L/1, a unique patented sheet F connector inlet that is compatible with any standard IEC male C14 connector.

Scolmore's German distributor for this product is the Engelking Elektronik GmbH. The inlet has been designed for the protection of computer equipment and servers from accidental disconnection, thus protecting valuable data. Simple to use, when the connector is pushed into the IEC-Lock inlet it locks in position and is released by pulling back the red tab.

IEC-Lock is also ideal for the protection of appliances that are vulnerable to vibration, where standard connectors may accidentally be disconnected. This is invaluable for applications that require a secure power source, particularly in the Data Communications Sector.

The potential benefits to a number of other markets including Medical, Broadcast and Retail are endless.
