

Into the future with Hytera – stronger together in Central and Eastern Europe

Bad Münden, January 12 2018

Professional mobile communications of top quality and highest security standards, latest innovations and proven solutions, united in one global group of companies: Hytera offers the most comprehensive portfolio of TETRA, DMR and LTE products as well as system solutions.

Into the future with Hytera: The global Hytera family is growing. Since January 1st, Hytera Mobilfunk has expanded its presence in Poland – providing the complete Hytera portfolio and competent advice close to the customer's site. Hytera is the perfect outfitter when it comes to mission-critical communications in public safety and critical infrastructure.

Stronger together – with global competence

There are several good reasons for this: Within the global Hytera group Hytera Mobilfunk GmbH from Germany is established as competence and development center for TETRA infrastructure "engineered in Germany". All TETRA infrastructure components such as base station, switching units and network management software are developed and tested in Germany. The company is also approved for the distribution and use of TEA2 encrypted components from Germany into Europe – which is used both in infrastructure and terminal equipment. TEA2 is crucial for use in authorities and governmental institutions in the Schengen area, including Poland, Estonia, Latvia, Lithuania, Slovakia, Slovenia, the Czech Republic and Hungary.

With Sepura from Cambridge in Great Britain, as new member of the global Hytera family, the group has added a leading manufacturer of innovative and high-quality TETRA radios to its comprehensive portfolio. Already, Sepura performs well in the Polish market, with good references and satisfied customers – the company is even the market leader for TETRA radios in some European countries, e.g. Germany. “By this, we pool our large experience in Poland and other countries of Central and Eastern Europe, primarily in the field of public safety and public transport, under one roof”, says Marcin Białczak, Sales Director Central & Eastern Europe.

Bringing together the advantages of a globally active group of companies, always at the cutting edge and with many years of experience and expertise in the DMR sector, Hytera is a powerful partner. Especially in public safety, the military, fire brigades and rescue services, with operators of public transport, airports, utilities, industry and retail and even event organizers Hytera solutions are well approved. Numerous fire brigades in Poland are already using DMR radio solutions and terminal equipment from Hytera, which prove their quality and performance in practice on a broad base.

“Together as an entire group, we are a tremendously strong partner. We have the experience and know-how to find and implement tailor-made solutions for every customer requirement. This is unique in the market and an enormous advantage for the customers. We are pleased to see that our customers from Poland and Eastern Europe also benefit from these opportunities”, says Matthias Klausing, CEO at Hytera Mobilfunk.
