New from Datapixel

Interferometer for Free-Standing Fibers in SMA Connectors

LASER COMPONENTS introduces a further development of the well-known DAISI-MT interferometer that now allows the analysis of free-standing fibers in an SMA connector: This makes it possible to evaluate the surface quality after polishing.

To display the complete surface of an SMA connector, the viewing field under examination is approximately 3 mm. Any protrusion and/or eccentricity of the fiber can be identified and optimized.

The Company

LASER COMPONENTS specializes in the development, manufacture, and sale of components and services in the laser and optoelectronics industry. At LASER COMPONENTS, we have been serving customers since 1982 with sales branches in five different countries. We have been producing in house since 1986 with production facilities in Germany, Canada, and the United States. In-house production makes up approximately half of our sales revenue. A family-run business, we have more than 170 employees worldwide.
