

POWERLINE VARIO – WORLD MARKET LEADER ANSMANN HAVE WON AWARD

“Amateur Photographer”, a well known magazine in the UK has rated the ANSMANN Powerline Vario with 5 out of 5 stars. The universal charger achieved above average results and received the GOLD AWARD: “this is a versatile and reliable charger that’s perfect for travel” was the verdict from the long-term test.

The Powerline Vario is the perfect universal charger for all rechargeable batteries and battery packs for digital cameras, smartphones or tablets. All Li-Ion and Li-Po battery packs with 3.6V/3.7V or 7.2V/7.4V can be charged. The adjustable contacts are ideal for individual adaptation to most Li-Ion/Li-Po battery packs. Alternatively you can charge two 1.2V Mignon AA or Micro AAA NiMH batteries. Thanks to the included micro USB charger and cable, as used by most USB powered devices, like smartphones or tablets, there is no need to carry additional ones. The voltage and polarity for lithium battery packs are detected automatically. Short circuit protection, wrong polarity protection, faulty cell detection are some of the safety features. Once a battery is connected the micro controlled charging process starts automatically. With automatic full-charge detection, the charger switches to trickle charge function for NiMH batteries and switches off for lithium batteries. Helps to keep batteries always ready to use. The indication of the charging status is shown via the LCD Display in 25% steps, showing you how charged your battery is. The Powerline Vario is compact and ideal for use when travelling. It is designed for worldwide use (100V-240V AC / 50-60Hz) and comes with different country mains adapters as well as an in-car adapter, so you can charge this and other micro USB devices from the car.
