Realtime traffic visibility

Build the next generation network with embedded DPI solution from Rohde & Schwarz Cybersecurity

Network infrastructure and security vendors increasingly need a deeper understanding of applications and IP network traffic. Full network visibility is an important component for applications such as network analytics, intelligent traffic management and cyber security. Vendors are embedding realtime application awareness in their solutions to enable their customers to better manage performance, gain business intelligence, improve the end user experience as well as secure applications end-to-end.

R&S@PACE 2 by Rohde & Schwarz Cybersecurity is a software library that uses different technologies – deep packet inspection, behavioral, heuristic and statistical analysis – to reliably detect network protocols and applications, even if they use advanced obfuscation and encryption techniques, and extract metadata in realtime.

Network equipment and security vendors use the software library to enhance their products with state-of-the-art protocol and application awareness capabilities in order to deliver full visibility into IP-based network traffic. Over 200 customers in more than 60 countries across the globe rely on DPI technology from Rohde & Schwarz Cybersecurity to maximize customer satisfaction, minimize time to market, and reduce R&D investment.

Rohde & Schwarz Cybersecurity also offers innovative and reliable endpoint, network and communication security solutions, and is part of the Rohde & Schwarz group with approximately 10,000 employees that generated a net revenue of approximately EUR 1.92 billion in the 2015/2016 fiscal year (July to June).

Rohde & Schwarz Cybersecurity

Rohde & Schwarz Cybersecurity is an IT security company that protects companies and public institutions around the world against cyberattacks. The company develops and produces technologically leading solutions for information and network security, including highly secure encryption solutions, next generation firewalls and software for network analysis and endpoint security. The award-winning and certified IT security solutions range from compact, all-in-one products to customized solutions for critical infrastructures. To prevent cyberattacks proactively, rather than reactively, our trusted IT solutions are developed following the security-by-design approach. Around 450 people are employed at the current locations in Germany, France and Denmark. As a result of the acquisition of DenyAll, the portfolio now includes vulnerability scanners and firewalls for business-critical web applications.

Rohde & Schwarz

The Rohde & Schwarz technologies group offers innovative solutions in all fields of wireless communications as well as in IT security. Founded more than 80 years ago, the independent company has an extensive sales and service network with subsidiaries and representatives in more than 70 countries. On June 30, 2016, Rohde & Schwarz had approximately 10,000 employees. The group achieved a net revenue of approximately EUR 1.92 billion in the 2015/2016 fiscal year (July to June). The company is headquartered in Munich, Germany, and also has strong regional hubs in Asia and the USA.
