

Press Release

IHSE launches compact-sized DVI-I extender for VGA input

Oberteuringen, August 29, 2013 – IHSE GmbH, the leading worldwide manufacturer of advanced KVM products for the switching and extending of computer signals, introduces a new Draco vario DVI-I extender card to the highly successful Draco vario extender range.

KVM extenders for computer signal extension consist of two modules: CPU Units at the source end connect to computers whilst CON Units provide signals to peripheral devices, including monitor, keyboard and mouse. Cat X and fiber cables provide interconnection between the CPU and CON Units.

For some time now, IHSE has offered Draco vario DVI-I extenders, providing conversion of analog VGA signals to digital DVI allowing a computer with VGA output to operate with DVI displays. In contrast to these devices with separate converter card, the new low cost and very compact single-board CPU Unit populates only one slot in a multi-card enclosure providing flexibility and minimal space requirement.

Setup and control has also been improved: the new DVI-I extender's OSD (On-Screen Display) can be operated using the remote keyboard replacing the former remote control. Users of previous versions of the Draco vario DVI-I extender with dual-board CPU Unit can also enjoy the benefits of operating the OSD via keyboard by applying a free firmware update.

To satisfy diverse uses and fields of application, the Draco vario DVI-I extender is optionally available with redundant interconnection to ensure uninterrupted operation in the case of link failure.

The full range of IHSE extenders including the new Draco vario DVI-I extender will be available for demonstration at IBC in Amsterdam, 13-17 September 2013.

About IHSE

IHSE is a leading producer of advanced KVM devices in global demand. KVM stands for Keyboard, Video, Mouse. KVM technology allows switching and extending of these three primary computer signals and many else, e.g. DVI, HDMI, digital audio or USB. At their headquarters near Lake Constance, Germany, IHSE manufactures switches for operating and switching between computers and consoles, as well as extenders for visually lossless signal transmission, with 30 years of experience.

IHSE products have been certificated for outstanding manufacturing quality, operability, resilience and enormous transfer speeds. Many renowned institutions across vertical sectors, including Broadcast, Post Production, Banking, Healthcare, Maritime, Air Traffic Control and Government rely on KVM solutions made by IHSE, Germany.
