

Universal charger and battery testing unit for nearly all batteries

ENERGY XC 3000

UNIVERSAL

Charging and testing device for the most common batteries and Li-Ion battery packs

FAST

High charging currents (adjustable) offer short charging times

GENTLE

Long lifetime of the rechargeable batteries due to an optimum charging control circuit

BATTERY CARE AND BATTERY TEST

Various charging programmes (CHARGE, DISCHARGE, BATTERY TEST and CYCLE) are available for charging, testing and refreshing the rechargeable batteries

EFFICIENT

Up to 10 batteries can be charged at the same time

SAFE

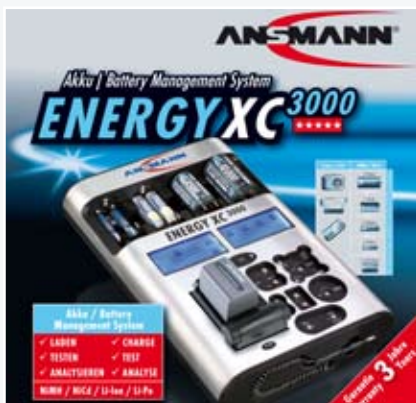

Faulty cell and alkaline detection

WORLDWIDE USE

Due to the wide voltage input range (100 - 240V)

WARRANTY

3 years

INCLUDED IN DELIVERY:

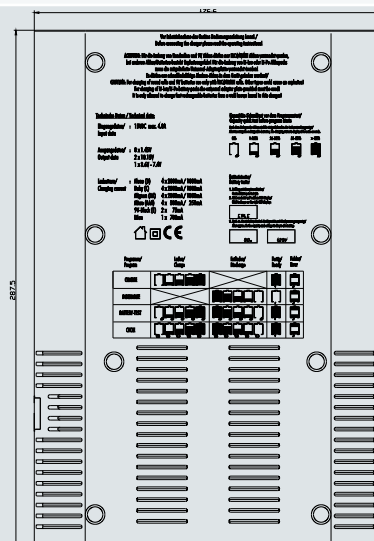

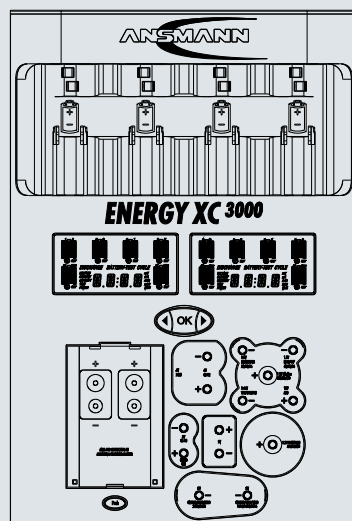

- > 1 x Charger/Tester
 - > 1 x Universal adapter plate
 - > 1 x Mains cable
 - > 1 x Coloured folding box
 - > 1 x Manual
- (Demo Video on the homepage)

ENERGY XC 3000

Part No.: 5207452

EAN: 4013674207459

PU: 2 Stück

PRESS RELEASE

With the Battery Management System ENERGY XC³⁰⁰⁰, ANSMANN is launching an interesting combination of universal battery charger and battery testing device on to the market, which was not been available until now. Not only the classic "big five" batteries (AAA, AA, C, D and 9V block sizes), but also a lot of Li-Ion Battery packs for cameras, camcorders and mobile phones can be charged. Additionally there is a very accurate testing unit for all common batteries and rechargeable batteries in the XC³⁰⁰⁰.

Although there are a lot of different features in the unit, the operation of the XC³⁰⁰⁰ is clear and easy; with only 3 buttons and the 2 clear LCD displays the different programmes can be selected very simply. Up to 10 cells can be charged (various charging currents are selectable), tested or refreshed at the same time. 5 different measuring systems are supervising the charging process to ensure the best lifetime of the batteries. Many Li-ion and Li-polymer batteries can be also charged and with the help of the flexible and adjustable contacts nearly all battery packs can be connected. The polarity and the voltage (3.6 or 7.2V) are detected automatically. Last but not least the Battery Management System XC³⁰⁰⁰ is able to check the capacity and the voltage of all common battery types. In only a few seconds the voltage rest capacity is checked in "%-steps". Ideal for globetrotters, the XC³⁰⁰⁰ can be used worldwide (100 - 240V). The XC³⁰⁰⁰, because of its high quality features, is the first choice for professional users at work and at home, for example laboratories, industry and local authorities. ANSMANN gives a guarantee of 3 years.
