Zircon Computing Announces Latest Software Release Version 3.1

Free Trial License Available Through May 9, 2010

Wayne, New Jersey – February 8, 2010 -- Zircon Computing today released Version 3.1 of the Zircon Software Product Suite of adaptive middleware and high performance software. The company also announced that it will provide a free trial license for usage in up to 256 cores through May 9, 2010.

"With this release Zircon software delivers several performance improvements, including in-process multi-core optimizations that Zircon's adaptive load balancer uses to scale the parallel processing of service requests, as well as exposes the powerful zNet service delivery platform to C++ application developers" said Alexander Mintz, CEO of Zircon Computing.

The zNet pattern-oriented middleware delivers a comprehensive array of functionality, including a real-time high-performance computing environment that enables the rapid development of cooperating business tasks by simplifying and automating key distributed programming tasks, and adaptive load balancing with real-time feedback.

Mintz adds: "these enhancements are a direct result of our client requests and exemplify our commitment to our customers and this marketplace. Our clients can now take full advantage of multi-core processors and cloud computing environments without significant code changes or application retrofitting."

Zircon also announced that a free trial license is available for download through May 9, 2010 for usage in up to 256 cores. The company also published developer's documentation, with comprehensive examples, and an updated product overview guide is available at the company website at: [Zircomp.com](http://www.zircomp.com).

About Zircon Computing

Zircon Computing, LLC, is an international software and services company based in Wayne, New Jersey. Founded in 2005 by senior technologists from the financial services industry, Zircon Computing develops and markets the Zircon Software Product Suite of adaptive middleware and high performance software and services worldwide, both directly to enterprise clients and through an international network of partners. Zircon Computing is privately held. For more information, please visit <http://www.zircomp.com>
