

SECUDE's transparent hard drive encryption is safe and user friendly

FinallySecure Enterprise for large and medium-sized enterprises - Central management with easy implementation

SECUDE | Michael Kummer |
Global Product Manager

Darmstadt, 21 February 2012 - SECUDE has launched a new version FinallySecure Enterprise 9.6.2 on the market. The user-friendly and transparent Endpoint Encryption solution offers high security with low implementation costs. The hard drive encryption solution with centralized management has been developed for large and medium-sized enterprises. Moreover, Novell will take this solution under its brand ZENworks.

"FinallySecure Enterprise is more user friendly than other endpoint encryption solutions currently in the market," says Michael Kummer,

Product Manager, SECUDE. "The new version has made further progress in the field of accessibility - thanks to the new screen reader, so visually handicapped users can also use it easily."

FinallySecure Enterprise 9.6.2 provides maximum security with the highest possible comfort, without disturbing the user or administrator at work. This security tool works completely transparent to the user who does not notice the encryption in the background. Due to its flexible and administration friendly architecture, the investment in this product is future-proof. FinallySecure Enterprise is already in use in many large companies.

With soft- and hardware-based hard disk encryption, FinallySecure Enterprise provides complete protection for stored data (data-at-rest). As a comprehensive security umbrella, this tool protects data against data theft and data loss. With this protection, companies can avoid infringement of legal regulations as well as brand damage. The solution's user friendliness and central management helps companies to adapt to the changing IT environment and adapt in a heterogeneous IT eco-system in order to be competitive in the long run. www.secude.de

SECUDE GmbH

SECUDE GmbH is an innovative and global provider of IT data protection solutions. The company was founded in Germany in 1996 as collaboration between SAP AG and the Fraunhofer Institute. Over the next 15 years, SECUDE engineered ground-breaking SAP security products for companies in the Fortune 500 group. In early 2011, SECUDE sold certain SAP-related technology and personnel to SAP. This strategic deal allowed SECUDE to better focus on its core competency – endpoint data protection – helping its customers to protect their sensitive information while achieving regulatory compliance.

Today, SECUDE employs over 60 highly motivated and educated professionals. It has offices in Europe, North America and Asia. SECUDE has the trust of a large number of Fortune 500 companies including many of the DAX-listed companies. For further information about the company and its offerings, please visit www.secude.com
