

Get the best of SharePoint by enriching it with flexible apps

IntrexX gives SharePoint a helping hand

United Planet, the Freiburg based software vendor, is convinced that SharePoint can be made better! The integration of the system with the portal software IntrexX aims at making SharePoint more dynamic and easy to use.

Freiburg, 07 July 2015. When people talk about collaboration software in companies, Microsoft SharePoint is normally the first solution that comes to mind. It is the most widely used platform of its kind and yet hardly anyone, whether users or IT representatives, is one hundred percent happy with it. [United Planet](#) wants to change this and aims to cure the typical pains of SharePoint with its software, [IntrexX](#).

SharePoint: Powerful but pricey!

SharePoint offers many possibilities in the areas of intranet, collaboration and content management. The system is, however, very complex, which raises certain problems. Modifications are very difficult and often external expertise must be consulted to carry out these changes. Considering that Microsoft's official calculations for constructing and maintaining a portal are for every €1 licensing costs, customers can expect to pay €9 in service costs, it is clear how quickly the budget is broken. Even if the required modifications are completed successfully, again and again problems appear with updates and release changes, if the platform was modified internally.

So that consulting costs don't become a showstopper

According to its manufacturer, the portal and integration software, IntrexX, can enhance SharePoint. Workflows and

applications can be easily developed in a graphical interface and can be directly connected with SharePoint. This allows for enhanced dynamics. SharePoint can be quickly and cheaply advanced and adapted to accommodate the desired features. It, therefore, remains lean and close to the standard version, which reduces the amount of maintenance required.

Security of investment through the strengths of two systems

The strengths of SharePoint are preserved, for example in the area of ECM. The integration with Intrexx should enrich the system with its increased data integration capabilities and easier methods of customising the solution. As SharePoint can be adapted to processes and user requirements, which are changing faster and faster, using Intrexx, investments that have already been made can be protected.

About United Planet

United Planet, with over 4,800 installations and more than 1,000,000 users of its portal and integration software Intrexx in the German-speaking market alone, is one of the market leaders in the sectors covering small and medium sized undertakings, public administration, and organizations such as hospitals. The company is led by Manfred Stetz and Katrin Beuthner.

Using the platform-independent standard software Intrexx, web-based applications up to complete intranets/enterprise portals with advanced functionality can be created much faster, and thus more economically, than with similar programs. Intrexx facilitates the creation of productive workflows and the generation of mobile apps for smartphones and tablet PCs from all manufacturers. Existing data from ERP systems, Microsoft Exchange, Lotus Notes, and any JDBC and OData data sources can easily be integrated with Intrexx and set in relationship to each other. The SAP-certified NetWeaver Gateway interface simplifies connection to the SAP system in an unprecedented manner. Even the directly competing Microsoft SharePoint software benefits from business functionality enhancements through the OData interface. The data integration capabilities of Intrexx are increasingly used as middleware to take unwanted complexity out of existing and heterogeneous software environments.

With Intrexx Share United Planet additionally offers a social business platform, which stimulates the exchange of knowledge and team work among employees, and integrates existing enterprise software into the communication process. In the Intrexx Application Store you will find hundreds of ready-made apps and complete industry portals, ready to download now.
