LED VSG allows safe connection of LED lit switches and indicators

Engelking's MPI-VSG is designed for applications such as door bells and alarm systems where the low DC tension required for LED's is not readily available.

All of the company's range of vandal proof LED lit pushbuttons and vandal proof LED indicators can safely be connected as the MPI-VSG provides the low voltage and high tension protection required by sensitive high efficiency LED's. The unit automatically adjusts to the required LED voltage and requires no further attention, thus avoiding accidental damage to the LED. Depending on input voltage, up to 5 devices can be connected.

Capable of handling input voltages from 8-30VDC or 8-24VAC the compact using measures only 22 x 23.5 x 12mm and is fully encapsulated in Polyurethane. Quick press terminals allow for speedy connection even in field applications.
