

PSE HI: Robust and Reliable Metal Line Switch from SCHURTER

SCHURTER develops and manufactures state of the art switch and pushbutton technologies including microswitches, piezo elements, switches with mechanical actuation, metal pushbuttons and keypads as well as display elements. A key focus is the Metal Line switch family that provides impressive robustness, high quality and attractive designs. SCHURTER also specializes in customised solutions offering models with customerspecific adaptations.

The PSE HI (high impact) switch features an anodized aluminium surface that can be pre-formed with raised symbols for long-term wear and excellent user haptics. The new labelling allows application of raised symbols, letters, and numbers as well as characters from the Braille alphabet to the anodized surface, thus making them both visible and tactile. A wide range of colours and legends facilitates the realization of individual designs. Due to its hermetic seal (IP67) the piezo switches can be used in areas that require regular cleaning and use of disinfectants. In addition, the switch's metal housing makes the buttons very robust and ideal for use in harsh environments (IK 06 according to DIN EN 50102).

Company:

SCHURTER continues to be a progressive innovator and manufacturer of electronic and electrical components worldwide. Our products ensure safe and clean supply of power, while making equipment easy to use. We offer a broad range of standard products including circuit protection, connectors, EMC products, switches and input systems, as well as electronic manufacturing services. Moreover, SCHURTER is ready to work with our customers to meet their application specific requirements, not covered in our standard range. You can rely on SCHURTER's global network of companies and partners to guarantee a high level of local service and product delivery.
