# Is your dating app breaking your heart?

One in 10 Americans, or roughly **31 million people** have used a dating site or app, and the number of people who dated someone they met online **grew to 66%.***
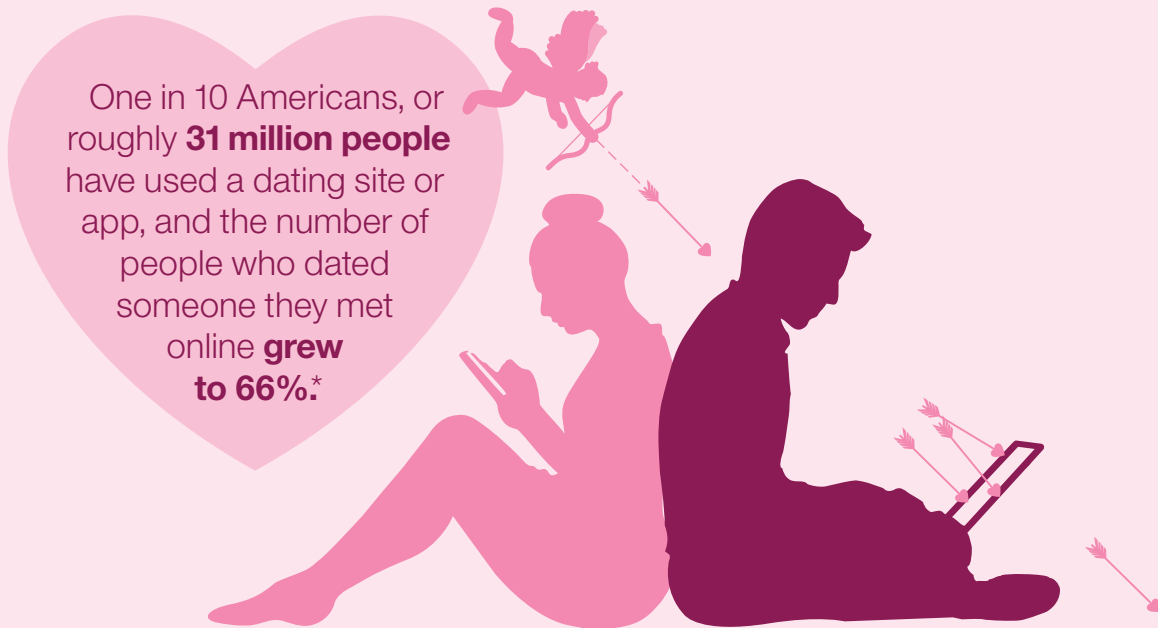

IBM® Security wanted to get to the heart of understanding what makes dating apps tick, so our researchers analyzed 41 of the most popular dating apps. They found that **63% of them have medium to severe security vulnerabilities,** putting the privacy of their users at risk.

Hackers now have the means to try and access sensitive data via mobile devices.

49% of popular dating apps have access to a user's billing information

73% of popular dating apps have access to current and past GPS location information

34% of popular dating apps have access to a user's camera

50% of companies have employees who use dating apps on work devices
