CeBIT 2010: CONTENS presents integration of Google Search Appliance and SaaS solution

Munich, 02/10/2010 – for the first time CONTENS presents an integration of the Google Search Appliance 6 into its Content Management technology, a new SaaS product and many more enhancements on the CeBIT. Co-exhibiting with CONTENS are Intergral and Railo Technologies, who are showcasing ShareDox SaaS DMS and the Railo Open Source ColdFusion server respectively.

At this year's CeBIT (March 2nd through 6th 2010), the Munich Content Management specialist CONTENS Software GmbH (Hall 6, stand J32) will showcase their integration of the Google Search Appliance 6 (GSA) with the CMS solution CONTENS.

Outstanding search results

Website editors as well as visitors can now use Google's superior search functions through the integration of the Google Search Appliance 6 into CONTENS. This new combination provides quick, relevant and secure access to information in CONTENS and in connected application databases, while increasing the efficiency of editorial work. Feature highlights include the indexing of large quantities of data and file types, as well as comprehensive support in twenty-seven languages, which is especially valuable for large companies and institutions. For companies with fewer requirements, Google Mini, the smaller version of the Google Search Appliance (www.google.de/gsa) can also be integrated into CONTENS.

SaaS accelerates online projects

A further innovation from CONTENS, is the newly developed Software-as-a-Service solution (SaaS) "CONTENS cloud". Customers no longer require their own IT infrastructure, because they can license the CMS as a complete hosted solution. In doing so, costs for hardware and support can be saved, while at the same time accelerating the implementation process. CONTENS cloud is available within minutes and like any other CONTENS installation, can be customized for individual demands. Customers benefit from a proven infrastructure

that is scalable and easily and reliably absorbs peaks in usage. The new model is ideal for smaller companies who are expanding quickly or have time critical projects.

CONTENS "Cluster" will also be unveiled at this years CeBIT. CONTENS Cluster enables the distribution of processor intensive operations across several servers. Options include the media server, which is responsible for the distribution of files, the service server, which does all the "heavy lifting", and the clustered editorial server for companies with a large editorial force.

ShareDox, the SaaS Document Management System

Joining CONTENS at this years CeBIT are our partners Intergral and Railo. Intergral are presenting the latest version of ShareDox (www.sharedox.com), a powerful SaaS Document Management solution which offers all the key features from one product, providing search, security, workflow and revision control for all types of content. For the first time, Intergral will also be showcasing the seamless integration between ShareDox SaaS and CONTENS cloud. Documents maintained in ShareDox can be selected, exported and published by CONTENS CMS. ShareDox and CONTENS offer the ideal combination of an integrated SaaS CMS-DMS solution built on the latest Adobe WEB 2.0 technologies of ColdFusion and Flex.

Railo, the Open Source ColdFusion server

Also at the CONTENS stand, the Swiss supplier Railo Technologies (www.getrailo.com) introduces the latest version of the Open Source ColdFusion server Railo 3.1.2. Railo is the fastest Open Source ColdFusion server, and boasts an impressive level of stability and reliability. Besides the Open Source version, Railo also offers an Enterprise Bundle, which includes additional software, such as the FusionReactor and FusionDebug – the Enterprise Bundle also comes complete with support.
