

PRESS RELEASE

JANUARY 2013

1 “blue PiraT” - Multi Bus Data Logger for all vehicle interfaces 2 from Telemotive AG

3 **Tokyo, January 16, 2013 – 5th Intl. Automotive Electronics Technology Expo (January 16-18):** The
4 increase of different bus systems in the automotive industry pushes the error diagnostics and analysis more
5 and more in the center of attention. As laboratory tests are not sufficient to reproduce customer-oriented
6 conditions and as communication in vehicles occurs via multiple electronic control units, Telemotive has
7 developed the **blue PiraT (Processing information recording and analyzing Tool)** – a Multi Bus Data Logger for
8 Ethernet, CAN, LIN, FlexRay, MOST (25/50/150) and serial interfaces, which can be used in the laboratory as
9 well as on the street. The data of the different bus systems are stored with synchronous time stamps on a large
10 up to 100 GByte hard disk and can be selectively downloaded after the test via Ethernet. Beside the operating
11 temperature of -20°C to +60°C the Data Logger is characterized by electromagnetic compatibility, vibration-
12 resistance and a compact design. To counter the limited electric power supply in a vehicle, an automatic power
13 management controls the blue PiraT. After a configurable time without data reception, the Data Logger switches
14 into stand-by mode; with bus activity the Logger immediately starts recording.

15 In addition, the “blue PiraT Client” supports the data download as well as the data configuration. Furthermore, a
16 comfortable handling for the tester is primarily focused. The “Remote Control Voice” or the camera connection
17 are additional accessories and complete the product range.

18 Visit us at our stand in “**Hall: East, Number: E 13-11**”. We look forward to seeing you.

About Telemotive AG

The Telemotive AG is specialized in the field of complex networked bus systems for the automotive industry, such as Ethernet, MOST, CAN, FlexRay, LIN, and Bluetooth and offers premium engineering services as well as product developments. The medium-sized business was founded in 2000 and is primarily working in the field of infotainment, entertainment, telematics, and electromobility. Furthermore, we cover the fields of driver assistance, test automation, logging, connection of mobile end device, and diagnosis. The innovative product range for laboratory- and vehicle testing includes the multi-bus data logger blue PiraT, the CAN SimBox, the MDA (Mobile Data Acquisition) – a complete system for the worldwide vehicle fleet management, the video tester blue AdmirAL as well as a customized prototype construction. By now, over 400 highly qualified employees ensure our competitive advantage. We support our clients in the realisation of technical trainings. Both, national as well as international automotive manufacturer and automotive supplier are clients of the Telemotive AG. The company distributes its products in European countries as well as in the USA, China, Japan, South Africa, and Brazil. The Telemotive AG is an active member of the MOST Cooperation and the GENIVI Alliance and has been ISO 9001 certified since 2003. In 2012, the “Great Place to Work® Institut” has honoured the Telemotive AG for the 5th time in a row with the award “Germany’s Best Employer”.
