Press release 7/2008

High-quality tampon printing machine at a favourable price – Sealed Ink Cup 60 E

TAMPOPRINT® AG, the market leader in tampon printing is continuously innovative and performing to the highest standards. With the new "Sealed Ink Cup 60 E" we have succeeded in creating a modern and a technically high-quality electropneumatic tampon printing machine. Based on the previous version "Sealed Ink Cup 60" an electrically driven tampon printing machine with many advantages such as double and triple print or piece counter was developed. Whether as a hand-work place or as a component of an automation, the "Sealed Ink Cup 60 E" can be used almost everywhere. The optionally available ink residue pick-up system further optimises the range of use of the "Sealed Ink Cup 60 E" and can be retrofitted quickly and at a low price since this new tampon printing machine is already preconfigured for the installation of this ink residue pick-up system. Control is Step 7 compatible, signal exchange takes place via a TAMPOPRINT® automation interface. The price-performance ratio of this machine series shows that a market leader who has been present on the market for decades can produce on a competitive basis also in Germany. The "Sealed Ink Cup 60 E" will be exhibited from October 14-18, 2008 at the FAKUMA 2008 in Friedrichshafen (Hall A1, Stand 1302). Visit us at the show!
