Fujitsu Optimizes CELSIUS Workstation Line-up for Autodesk

High-performance systems make it simple for professional Autodesk software users to find their ideal configuration

Regensdorf, September 21, 2011 – Fujitsu today announces a special line of mobile and desktop CELSIUS workstations optimized specifically for users of Autodesk 3D software in design, engineering and entertainment environments.

Professionals using Autodesk software suites require workstations that have enough all-round performance to maximize the software's advanced capabilities. For an Autodesk user, this means ample processing power, generous display graphics capabilities, plus enough memory to ensure optimum performance. Fujitsu is targeting this market with a new line-up of eight different Fujitsu CELSIUS workstations optimized for Autodesk. The purpose-built, competitively-priced workstations have the performance to meet Autodesk users' needs, and eliminate the risk of incompatibility between hardware and software.

Dieter Heiss, Head of Workplace Systems at Fujitsu Technology Solutions says: «For design professionals and engineers, finding the right configuration of hardware and software to cope with their computing needs can be time consuming and risky. We are taking the guesswork out of the hardware selection process by teaming up with Autodesk. The Autodesk-optimized Fujitsu CELSIUS workstations guarantee the highest levels of performance and efficiency, even when running the most demanding computing tasks, such as creating graphics-intensive 3D entertainment or running virtual product tests.»

Fujitsu's CELSIUS Workstations Optimized for Autodesk are now available via Fujitsu Channel Partners in the CEMEA&I region (Continental Europe, Middle East, Africa & India.) More information can be found at <http://ts.fujitsu.com/OptimizedforAutodesk>.
