

PRESS RELEASE

AMS Technologies Presents Innovative Structural Health Monitoring System

Martinsried, 25. Januar 2013 – SensoBrick® – a complete and self-sufficient in-a-box monitoring solution that brings you directly in control of the behavior of your structures – Monitoring for environmental condition (Temp, Vibration, Inclination)

Structural health monitoring system SensoBrick® offers the chance to turn away from labor intensive and operator subjective visual inspection towards automated monitoring of key parameters on buildings, infrastructure or cultural heritage.

SensoBrick® is designed for immediate installation without laying additional interfacing cable. No matter if on bridges, streets, houses, memorials or hillsides, thanks to the built in battery with a life of up to five years you can install the SmartBrick® wherever and whenever you need it, without any additional power supply.

Its modular approach allows to integrate additional external sensors and link them with the main communication interface of SensoBrick®. Its intuitive user interface lets you monitor and record changes in any kind of structure by one click over your cellular phone, your tablet or your PC.
