## **Open Source XML Gateway available – eperi starts Public Beta-Test**

**eperi, leading manufacturer of Open Source Security solutions,  
presents the new eperi Open XML Gateway  
at the it-sa 2011, hall 12, booth 374.**

Darmstadt, October 6th, 2011 – By now, Web Services and Cloud-Computing are inherent components of many companies' IT infrastructure. It's become taken for granted to exchange and use data and services by internal and external networks. XML-based communication (like e.g. web services) is increasingly exposed to threats. These weak points need to be protected efficiently.

eperi presents their Open XML Gateway solution at the it-sa 2011 in Nuremberg from October 11<sup>th</sup> to October 13<sup>th</sup>, 2011. The eperi Open Source XML Gateway enables companies to easily protect business critical applications and services. Even prior to release interested parties may participate in the eperi Open Source Security solution's Public Beta.

eperi Open XML Gateway provides e.g. methods for protection against SQL Injection and XXE attacks and enables realization of scheme validation as well as WS-Security standards.

The Release Candidate RC1 is ready to use as VM Image „Out-of-the-Box“ in just a few steps. An easy and user-friendly installation and administration of the solution ensure a quick and uncomplicated roll-out and thus the protection of web services in no time at all. Preconfigured Best Practice Security Level provide XML security configuration by just a few mouse clicks. In the expert mode also most complex security requirements may be configured easily.

The flexible architecture grants that Open XML Gateway may easily be combined with other eperi solutions like e.g. SSO. eperi Open XML Gateway may be used as software but also as virtual appliance or as Amazon AMI. Thus companies may easily and efficiently integrate the Open XML Gateway into their infrastructure.

Further eperi highlights at this year's it-sa will be Security for Cloud Computing and Mobile Security. Visit us from October 11<sup>th</sup> to October 13<sup>th</sup>, 2011 in hall 12, booth 374 and allow yourself to be convinced by our solutions' potential.
