Release date : immediate

Stainless Vandelproof Switch has Alternate Switching Feature

This new range of robust stainless steel switches from Engelking features a removable microswitch with two sets of electrically independent contacts. One set of contacts is configured as normally open while the other set is normally closed. The 2.8mm gold plated Faston / Solder tags can thus be wired for conventional on/off as NO or NC contacts, bridged to provide a changeover function or as alternate switching, giving users the maximum flexibility.

The beautifully finished turned stainless steel housing is secured in the panel via a rear mounted metal locking nut.

What makes this switch particularly attractive is the relative long switching action with very positive feel and the 22mm panel cut-out.
