

PRESS RELEASE

January 2011

Exclusive Carbon Kits for the TECHART GrandGT based on Porsche Panamera

The TECHART GrandGT – extraordinary, confident and uniquely sporty. As of now exclusive Carbon Styling Kits are available for the distinctive individualization program for the Porsche Panamera. For highest demands on quality, design and sportiness.

Carbon fibre components convince with extraordinary product properties such as an impressive dimensional stability, a great strength and a low intrinsic weight. The selected exterior components, which are made of carbon fibre, create unique highlights at the entire car. The front apron with the front grill insert and splitter in carbon fibre shows the viewer the dynamic and sporty design approach of the TECHART GrandGT. Even at the rear of the Panamera, the high-tech material is used in a generous way at the diffuser as well as at the gurney flap of the dominant rear spoiler. Refined air ducts at the flanks of the car complete the carbon fibre components in the exterior of the 4-seater.

With the Carbon Interior Kit the driver can experience the sportiness and elegance of the TECHART GrandGT also in the inside of the car. Carbon fibre trims at the dashboard, the door panels as well as the center console panels in carbon fibre and the illuminated door entry guards in a carbon fibre look ensure a high presence of the material also in the interior.
