AK1350 with coding

The PTR multi-connector series AK1350 with spacing 3.5 mm – known for its compact design – is now also available in a version with coding pins “AK1350/..-3.5-GREY-CP”.

Normally coding pins are added to terminal blocks as a second manual operation.

With this series the coding pins form part of the housing, saving assembly time and providing a solid construction. If shortened or truncated pins are required then PTR can arrange on request.

As with the standard AK1350 this new CP series is available in 2 to 12 poles.
