

AS Solar GmbH: Easy PV-System Configuration with AS Profiplaner

Hannover, April 21, 2011:

AS Solar GmbH presents a new planning tool for photovoltaic systems at Intersolar Europe 2011 in Munich: **AS Profiplaner**. With this pragmatically oriented dimensioning programme installers can save a lot of time and easily work their way through the self-explanatory planning process. A major advantage of the new software is that users get effective results and practical quotations without having to go through a long familiarisation process. The databank contains a broad portfolio of panels and inverters which can easily be updated online.

Users enter the roof specifications and non-usable areas intuitively and do not require any special training. Apart from an automatic module configuration and a framework layout **AS Profiplaner** comes with a reliable calculator of costs. In addition to that, the inverter dimensioning can be changed manually. Special highlight: At the push of a button the programme calculates the optimal customised PV monitoring system.
