

Press Release Hartblei for PMA 2008

Hartblei Shift- and Tilt-Lenses

Unique Digital Lenses on PMA 2008.

Munich, 23.01.2008 - The lenses of the ukrainian company Hartblei Optica Kiev with 10 mm Shift- and 8 degree Tilt-Functions for 35mm Cameras with nearly all common mounts (interchangeable) can be found on PMA 2008 (31.01.-02.02.2008) in Las Vegas on the Stand of Carl Zeiss . (German Pavillion, LVCC Level 2 , Section 16/S2).

All Hartblei Shift- and Tilt-Lenses are so-called Superrotators, means the Shift- and Tilt-functions can be rotated independently 360 degrees each, thus providing nearly the photographic capabilities of a view camera. The lenses are based on highend optical kits provided by Carl Zeiss. With their especially valuable/rugged built quality and with a 30 mm prolonged flange focal range compared to normal 35mm lenses , these are the first lenses, which have been constructed especially for tasks in professional photography to solve with digital 35mm bodies. The problem of microlens corner shading with full format sensors is eliminated even at full shift and tilt.

Hartblei Prototyp 4/40 IF TS, for 4289,- €

Hartblei Prototyp 2,8/80 TS for 1989,- €

Hartblei Prototyp Makro 4/120 TS for 2949,- €
