On a new level: TECHART Sport Module for Porsche air suspensions

Leonberg, June 2nd, 2015

New TECHART sport options offer enhanced driving dynamics, comfort and styling. The new TECHART Air Suspension Module »Sport« is available for all current Porsche Macan and Cayenne models. The plug-in system provides sharpened driving dynamics, a sportier look and more comfort. Still on board: Automatic Parking Level. The exclusive TECHART feature is an added function which has been renowned since it was introduced in TECHART systems for previous Porsche models with air suspension.

Sport-focused suspension setup

For sharpened driving dynamics, a sportier appearance and more comfort, TECHART offers its new Air Suspension Module »Sport« for Macan and Cayenne models with Porsche air suspension.

The setup favors more direct and agile ride height levels. At Normal Level, the chassis of the Macan is lowered by 10 mm compared to the standard air suspension. When driving in Sport Plus mode as well as in Low Level, the vehicle is lowered by additional 20 mm. The Terrain Level however, remains unchanged compared to standard. As a result, TECHART's Air Suspension Module »Sport« provides particularly sporty suspension settings and maintains maximum ground clearance for off-road terrain at the same time.

The module for Cayenne models lowers the body by 22 mm in Normal Level and by 10 mm in Low Level.

Lower Loading Level for the Macan

Added comfort: the lowered Loading Level. For easier loading of the luggage compartment, the rear end of the Macan can be lowered even more, if the Macan is equipped with the TECHART Air Suspension Module »Sport«.

On a new level: TECHART Sport Module for Porsche air suspensions

Unique TECHART feature: Automatic Parking Level for Macan and Cayenne

The Automatic Parking Level is a unique TECHART feature for Macan and Cayenne. After locking the vehicle, the body is automatically lowered by another 30 mm (Macan) or 20 mm (Cayenne) if Low Level was selected before. This creates a powerful appearance at standstill which distinguishes clearly from the series model.

Also available: TECHART performance options for vehicles without air suspension

For Cayenne and Macan models with steel spring suspension, TECHART offers a range of sporty performance options, too. Sport springs and spacer kits provide both, increased driving pleasure and an appealing distinctive styling.
