Distribution Contract for Optical Fibers

Strategic Partnership between LASER COMPONENTS and Polymicro Technologies

LASER COMPONENTS introduces a new partner for optical fibers. Patrick Paul welcomed Polymicro General Manager James P. Clarkin to the company headquarters in Germany for signature of the new distribution contract, which applies to the entire German speaking countries and territories from 01.12.2011.

„We are pleased to have gained one of the leading manufacturers of optical fibers as a new strategic partner“ commented Patrick Paul. Part of Molex Fiber Optics, Polymicro Technologies has established a reputation as a market leader in specialty optical fiber technology over more than 25 years, particularly in industrial and medical applications.

„This has significantly enhanced our product portfolio. For example, we are now in a position to offer hollow waveguides designed for CO₂ as well as Er:YAG lasers, which helps us increase our potential market. Medical applications also benefit from IR fibers, which can be used to replace expensive articulated beam delivery arms“ stated Paul. Further new products will be announced in the coming weeks and months, including UV fibers.

Trade Shows

BiOS 2012, January 21-22, 2012, The Moscone Center, San Francisco, **South Hall – Booth 8517**
Photonics West 2012, Jan. 24-26, 2012, Moscone Center, San Francisco **South Hall – Booth 517**
Analytica 2012, April, 17-20, 2012, Munich International Trade Fairs, **Booth A2.400A**

The Company

LASER COMPONENTS is specialized in the development, manufacture, and sale of components and services for the laser and opto-electronics industries. With sales offices in four different countries, the company has served its customers since 1982. In-house production at six locations in Germany, Canada, and the USA began in 1986 and is meanwhile responsible for about half of its turnover. Currently, the family-run business employs more than 130 people worldwide.
