BRINGS TOGETHER WHAT BELONGS TOGETHER!

PUT AN END TO UNNECESSARY JOURNEYS AND SIMPLIFY THE MANAGEMENT OF YOUR MULTI-BRAND FLEET - WITH A SINGLE SYSTEM.

ProFleet Connect is an integrated hardware and software solution: Vehicles of all makes can be integrated using a single retrofit and multi-brand telematics system.

It allows you to keep an eye on all your vehicles, stay in contact and become the best co-pilot your drivers ever had.

Start getting the best out of your fleet now – and transform it into a proper team!

ONE FOR ALL!

AND ALL EVEN BETTER!

»BASIC PACKAGE LINK

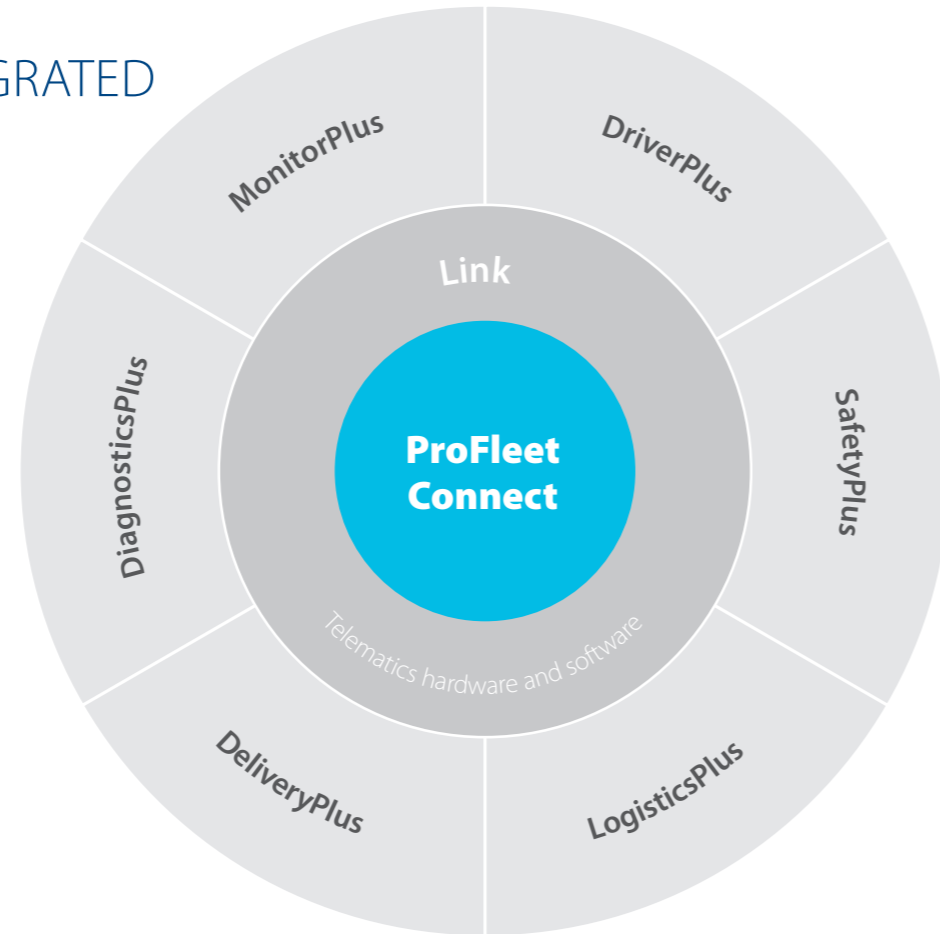

HARDWARE AND SOFTWARE – PERFECTLY INTEGRATED

The ProFleet Connect software is designed as a modular system: That's why the system always matches your requirements in a perfect way and provides you exactly the functionality you need for your work – and it grows as your business does.

The basic package Link provides you already with the basic functionality you need to digitise your fleet such as vehicle tracking and driver performance management to assess individual driving styles. Furthermore it can be flexibly upgraded with additional modules at any time.

The add-on modules include features that relieve drivers from annoying paperwork, transmit vehicle condition in real time or even monitor for example load temperature.

With ProFleet Connect, you have your entire fleet under control at all times. No matter which vehicle brands and models you're dealing with!

»DRIVERPLUS

AN ASSISTANT FOR ALL JOURNEYS

DriverPlus provides your drivers with an assistant that not only enables perfect communication between the driver and the office, but takes care of navigation and enables paperless documentation, for instance of vehicle inspection checklists.

In order to simplify the handling of these and other functions for your drivers, we offer the DriveTab: A robust tablet computer with an intuitive user interface. It's installed directly in the cab, but can be removed at any time for use outside of the vehicle.

DriveTab simplifies communication between the driver and the transport office: Incoming messages are archived in the personal mailbox and can be quickly answered using preconfigured standard text messages.

DriverPlus makes the manual collection of tachograph data a thing of the past too: Thanks to its »Remote Tacho Download« feature, you're always up-to-date regarding drivers' driving times – even when the vehicle is still on the move.

»SAFETYPLUS

SAFER AND CLEANER THAN EVER

The safety of the vehicle and the driver cannot be allowed to suffer in the face of increased competitive pressure. This is why our SafetyPlus module keeps a constant eye on everything that happens while the vehicle is on the road: It logs events such as emergency braking and speed limit violations and thus helps to optimise the driving style of your drivers.

Most importantly, it protects you and your drivers in the event of a safety-relevant incidents. Using the logging function, you can prove precisely what happened shortly before and after the incident – and even follow the events at any time thereafter.

When driving behaviour is optimised by SafetyPlus – avoiding unnecessary braking and acceleration – it also has a sustainable positive long-term effect on fuel consumption and on your carbon footprint and bottom line.

HOW ARE THINGS GOING?

TRAFFIC JAM AHEAD! I'LL BE
ARRIVING 20 MINUTES LATER!

THE CUSTOMER HAS BEEN
INFORMED – HE'S EXPECTING YOU!

»LOGISTICSPLUS

ON THE RIGHT TRACK

The ProFleet Connect LogisticsPlus module makes it more convenient and efficient than ever to monitor, carry-out and document all your fleet's journeys.

In the so-called »Schedule Execution Board« (SEB), you have all the routes and transport orders in view at any time, and you can also monitor your drivers' driving times accordingly and plan their daily journeys in an optimal way. No matter if you create one-off routes manually, use templates – or import your routes from other systems, like your transport management system.

Thanks to the SEB, you also have the status of your orders at your fingertips at all times and thus know whether a delivery has arrived earlier than expected, on time or late.

And if you wish, you can also allow your customers to track their deliveries: Additional transparency that your customers appreciate. Furthermore, LogisticsPlus is equipped with an interface that is compatible with the most popular ERP systems.

»DELIVERYPLUS

FROM START TO CUSTOMER

DeliveryPlus allows you to follow the logistics process from the moment the driver sets off until the customer signs for delivery: Irrespective of whether your drivers are delivering or picking up a new shipment – with our add-on module, you know exactly what's happening at any specific moment.

You're kept informed at all times about every customer transaction and can quickly and proactively intervene as necessary: This increases the service level for your customers and reduces subsequent costs from customer claims.

Thanks to DeliveryPlus, all of your deliveries and pick-ups are electronically recorded and the condition of the freight photographically documented. This protects you and your driver against third-party claims.

In addition, DeliveryPlus offers a convenient way of processing consignments generated by the order processing or ERP systems of your customers.

**I'LL TAKE CARE OF THE
CUSTOMER'S COMPLAINT!**

**GREAT, THANK YOU!
I WILL JUST CARRY ON!**

»DIAGNOSTICSPLUS

SERVICING BEFORE ANYTHING HAPPENS

Fast servicing procedures not only reduce downtimes but are a matter of taking sensible precautions too: Our DiagnosticsPlus module allows workshops of your choice to access the functional status of your vehicles – and in doing so, helps to discover faults before they develop into serious problems.

Regular inspections and warranty maintenance are also simplified and accelerated as parts that need replacing can be ordered in advance and the workshop can prepare for specific repair procedures ahead of time.

You can use our ProFleet Connect software to remotely download the most important vehicle data (e.g. tyre pressure, error codes, etc.) from all of your vehicles at any time, enabling you to respond more effectively to upcoming repairs and co-ordinate them directly with your workshop.

»MONITORPLUS

ALL-ROUND PROTECTION

Being able to closely monitor safety and vehicle parameters not only lets your drivers feel secure, but gives you the reassurance of having everything under control.

MonitorPlus continuously provides you with up-to-date data regarding the temperature in the cargo area, the status of the doors and other sensor data. This continuous verification takes place automatically and enables, for example, the complete monitoring of the cold chain.

The corresponding alarm functions not only ensure that your load is consistently cooled, but also inform you of any unauthorised vehicle access, thus increasing the security of the load in your vehicles.

**IT'S A GOOD FEELING TO KNOW
MY TRUCK IS SECURED!**

»OVERVIEW OF THE ADVANTAGES

A RELIABLE SOLUTION FOR RELIABLE TEAMS

COMPETITIVE ADVANTAGE

through more efficient use of all vehicles in your fleet and reduced administrative overheads

IMPROVED SAFETY

through live driver coaching and comprehensive vehicle monitoring

INCREASED SUSTAINABILITY

through optimisation of driving style and fuel savings
