

We are happy to invite you to:

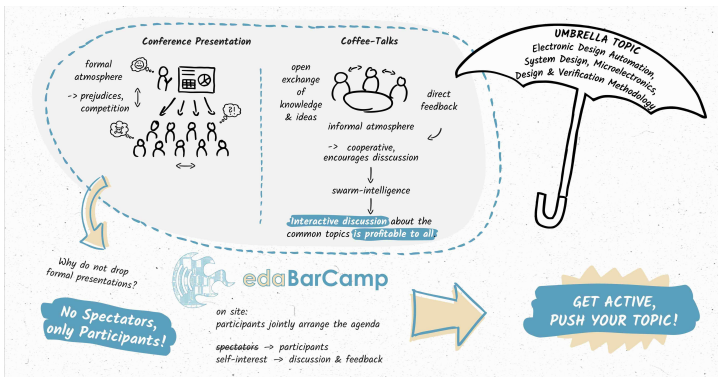

edaBarCamp

the next generation

11./12. December 2017
Leibniz University Hannover (LUH)
Institute of Microelectronic Systems (IMS)
Hannover Germany

You are engaged in Microelectronics, Embedded Systems and Electronic Design Automation (EDA) and looking for inspiration in your profession? If you are open for a new event format, offering an exchange of new ideas with colleagues then you should join the next edaBarCamp in Hannover!

The edaBarCamp offers an open space and is detached from a formal event structure. As a participant you do not only take part. You build the program and you propose, lead and contribute to sessions. There we will interactively propose, exchange and jointly develop approaches, innovations and solutions. By meeting and discussing on a par with each other, your individual work and interests will benefit from the open expert community.
