### ITW Hall-Effect Switches Sealed to IP67 offer Solid State Switching for High Reliability

The 48SS range of Hall-Effect pushbutton switches provide users with a reliable contact free solution sealed to IP67 using a Hall-effect sensor.

Available in a wide range of designs both round and square, the pushbuttons are available in a variety of colored plastic or in chrome.

Additionally they can be supplied with integrated LED indicators in a number of different colors.

Capable of up to 1 million mechanical switching cycles in the momentary version, a version with maintained switching can also be supplied.

Connection versions for PC board and solder tags are also included in the wide range of products.

The robust sealed construction means that these switches can be used in a number of applications where a rugged product is required such as mass transport controls, instrumentation and hand-held control devices.
