TECHART Program for Porsche Cayenne models

-World premiere TECHART for Porsche Cayenne S Diesel-

Leonberg, February 2013 - TECHART Automobildesign provides Porsche's high-torque SUV Cayenne S Diesel with its aerodynamic kit. Efficiency meets extravagance. The TECHART Aerodynamic Kit for Porsche Cayenne S Diesel presents itself to public at 83rd Geneva Motor Show from March 5 to 17 2013 in deep black metallic paint, adapted black leather interior, light green applications and 23-inch TECHART Formula light alloy wheels in black with outer rim in light green.

Design.

The three-part front spoiler with integrated air outlets ensures optimized brake and inter-cooling. The carbon aero engine hood with integrated double-sided air outlets gives sufficient oxygen to the 8-cylinder turbo diesel motor by improving heat management in the engine compartment. TECHART Lighting Package with LED or halogen lights as twin headlights with high-beam and fog lights, as well as the multifunctional daytime running light is available as an option. The LED system unit combines daytime running lights, side light, parking light and indicators in one common housing. The luminous intensity automatically adapts to the selected day light setting. Day time running lights are dimmed when vehicle is turning to ensure that indicators stand out. The system is ECE-approved and fulfils all requirements for ECE-regulation R87 for daytime running lights.

TECHART Front Apron I and side skirts emphasise the sporty appearance and transfer TECHART-DNA consistently to the rear. TECHART Roof Spoiler, TECHART Rear Apron with integrated diffuser and two reflectors complete the aerodynamic kit for Porsche Cayenne models. In addition trims and painted or carbon styling packages allow various individualisation options upon request.

The TECHART Exhaust System Sport with EC type approval and TECHART Dual Oval Tube with embossed logotype give a visual and acoustic significance to the Porsche Cayenne models.

At present TECHART develops a power kit for the Porsche Cayenne S Diesel, which will be based on the TECHART Engine Management System TECHTRONIC. Without touching the standard engine management software intelligent electronics lead to a significant increase of performance and driving dynamics, without affecting vehicle diagnostics or servicing. All electronic engine protection features are preserved.

TECHART Program for Porsche Cayenne models

-World premiere TECHART for Porsche Cayenne S Diesel-

The TECHART Program for Porsche Cayenne models offers the TECHART Formula 5-spoke light alloy wheel in 20- to 23-inch, the TECHART Formula II 5-spoke light alloy wheel in 22- and 23-inch, and the TECHART Formula III 5-spoke forged light alloy wheel in 21- and 22-inch.

New: Formula II GTR 5-spoke light alloy wheel and Formula III 5-spoke forged light alloy wheel in burnished glossy smooth finish.

TECHART OE-Quality: Exterior components are not only characterized by ease of painting, installation and maintenance but also by trouble-free assembly at every Porsche Centre and every authorized workshop.

Interior.

TECHART in-house manufactory focuses on perfection, German engineering and the use of high-quality materials when refining Porsche Cayenne models. Premium types of leather, decorative stitching in individual colours and trims in exotic woods or carbon are just a few possible highlights to choose. Typically TECHART: the multifunctional sport steering wheel with TECHART paddle shifters. The TECHART Entertainment Kit W2 with two 7-inch displays located at the front seats, folding single rear sports seats and a centre console unit, equipped with 12-volt power supply, refrigerator and storage compartments can be ordered optionally.
